Greenfield

SLASHER MOWER

Thank you for buying Australian made GREENFIELD. Your Greenfield IPD (Industrial Power Drive) Slasher Mower is made for hard work and is ideal for large lawn mowing and heavy weed clearing. Follow the manufacturer's operating and maintenance instructions and many years of excellent trouble free service can be expected.

BEFORE OPERATING the mower **read the owner's manual carefully**. Do not allow children or any person unfamiliar with the safe operating procedure to operate this slasher mower. Your Greenfield mower has been designed to meet stringent safety standards - but we remind you that a mower is a cutting device **used incorrectly it could cause personal injury**.

SAFETY INSTRUCTIONS

1. **WARNING - Remove spark plug lead** to avoid accidental starting before attempting any inspection or maintenance on the mower.
2. Do not mow whilst people, especially children or pets are in the mowing area.
3. Make sure the area to be mowed is clear of sticks, stones, bones, bottles, wire and other debris which could be thrown by the blades.
4. Do not operate the machine without first inspecting the blades, blade bolts and blade holder for wear or damage. **DAMAGED BLADES AND WORN BOLTS ARE MAJOR HAZARDS**. Always replace blades and blade bolts in sets to preserve balance. Replace worn or damaged parts with genuine GREENFIELD replacement parts only.
5. Never mow while barefoot or wearing open sandals or thongs. Wear long trousers and heavy shoes it is also important to wear suitable eye and hearing protection.
6. Before using, check that the stone guard provided by the manufacturer is securely fitted. Regularly check all the components on the slasher mower to ensure the machine is in a safe operating condition.
7. A mower operator should be in good physical and mental health and not under the influence of any drug or alcohol which may impair vision, co-ordination or judgement.
8. Refuel outdoors only. Do not smoke while fuelling engine. Never remove the cap of the fuel tank or add petrol while the engine is running or if the engine is hot, allow it to cool. Remove fuel cap slowly to relieve any tank pressure. Do not overfill the fuel tank. If petrol is spilled do not attempt to start the engine but move the machine away from the area of the spill and avoid creating any source of ignition until petrol vapours have dissipated.
9. Check for fuel leaks while refuelling. If a fuel leak is detected, do not start the engine until the fuel leak is fixed and the spilled fuel is wiped away.
10. Do not operate the engine in a confined space where the poisonous exhaust fumes (carbon monoxide) can collect.
11. Always disengage the cutting blades before starting or stopping the engine. NEVER walk in front of the mower when the engine is running, even if the drive clutch is out. Always stop the engine.
12. Always operate the machine across slopes, not up and down, as misjudged footing could cause the machine to run back onto the operator or run out of control down the slope. Never operate the mower across a slope steeper than what you would safely drive a car across.

13. Stay alert for holes in the terrain and other hidden hazards.
14. Before crossing paths, driveways or any other areas foreign to mowers, disengage cutting blades, stop the engine and lift cutter deck to maximum height.
15. Watch out for traffic when operating the mower near roadways. Always mow with the safety grass deflector properly fitted.
16. Disengage the drive to the cutting blades and stop the engine -
 - (A) Before refuelling.
 - (B) Before fitting grass deflector.
 - (C) Before removing side grass catcher (optional extra).
 - (D) Before clearing blockages.
 - (E) Before inspecting, cleaning or working on the mower.
 - (F) After striking a foreign object (Inspect the mower for damage and make necessary repairs before restarting and operating the machine).
 - (G) If the machine starts to vibrate abnormally (check immediately)
17. Disengage drive to the cutting blades when not in use or in transporting.
18. Do not over-speed the engine or alter governor settings. Excessive speed is dangerous and shortens the mowers life.
19. Store the mower in a well ventilated room away from naked flames such as may be found in some hot water heaters.
20. Keep the engine free of grass, leaves or excessive grease. These can be a fire hazard.
21. Replace worn or faulty exhaust mufflers.
22. Do not lend or sell the slasher mower without the owner's manual.

OPERATING INSTRUCTIONS

Before Starting

Fuel

Top up with clean regular UNLEADED petrol only. Don't overfill. Make sure the petrol is free from impurities, particularly water. Do not use stale petrol in your mower.

Engine Oil

Check oil level by positioning the mower on level ground, remove the dipstick and wipe clean, replace the dipstick screwing firmly into position. Remove again and sight the oil level. Fill to the full mark. **DO NOT OVERFILL.** Dipstick must be firmly in place when the engine is running. Refer to crankcase lubrication in the maintenance section of this manual for oil recommendations.

Tyres

Check Pressure 140 KPa (20 Psi) Do not over inflate.

To Start

Disengage blade clutch. (cutter out). Disengage drive clutch. (drive out). Turn fuel tap on (if fitted). Set throttle control to choke (throttle knob full out). Pull cord steadily. If engine does not start, push throttle control halfway (choke off). Pull cord again.

To Stop

Disengage drive (drive out). Reduce engine speed (push throttle control "in" to idle). Disengage blade clutch. (cutter out) Allow engine to cool down by idling approximately 1 minute before stopping. (push throttle control fully in). Turn fuel tap off.

To Operate

The Greenfield slasher mower can be operated with or without the drive engaged. To engage blades or drive, shift respective levers slowly. The blade clutch lever is mounted on the right hand side of the cutter deck. While the drive clutch handle is located on the right hand side of the handle bars, cutting height can be varied as desired by means of an adjustable lever on the left side of the handle bars.

MAINTENANCE

Crankcase Lubrication

Change engine oil after the first 5 hours of operation then every 6 months or 25 working hours, whichever comes first. Change more often in heavy work or dusty conditions. Drain engine oil whilst engine is warm then replace with a high quality detergent oil classified for service SF/CC by the A.P.I such as Briggs & Stratton "Warranty Certified" SAE 30 oil. Available from Briggs & Stratton service dealers. Fill to full mark indicated on the dipstick. Do Not Overfill.

Air Filter

Service the air filter as per the engine manufacturers booklet. Clean or replace more often in dusty conditions. Never operate the engine without the air filter correctly and securely fitted, rapid and expensive wear will occur.

Drive Dogs

There are two sizes supplied. The smaller set is for slow speed (heavy grassed areas) and the larger set is for normal use. To change the drive dogs, Disengage drive (Drive out), remove the nyloc nut and washer from ends of the drive shaft and slide off the drive dogs. Slide the new drive dog onto the ends of the drive shaft making sure that the recess in the end of the dogs engages over the pins in the drive shaft, fit washers and tighten the nyloc nuts.

Gear Box

With gears running on large sealed ball bearings inside a factory sealed & lubricated gear box. No maintenance is required.

Controls

The height adjustment and drive engaging levers are conveniently located on the handlebars, The blade clutch lever is mounted on the cutter deck, these require oiling after cleaning. Move lever backwards and forwards while oiling to allow oil to penetrate. Disengage blade clutch and drive after using.

Tyres

Check pressure 140 Kpa (20 Psi) **Do Not Over Inflate.**

Cooling System

Remove the blower housing and clean out grass and debris to prevent overheating. Refer to manufacturer's booklet.

Cleaning

Clean off all grass and other debris before storing. Sticks, stones or and accumulation of grass and other debris will damage belts and fracture pulleys if they go through between the pulley and belt. So keep the cutter deck clean.

Never wash your Greenfield with a high pressure wash gun. Water and dirt could bypass the seals in the bearings causing premature bearing failures and rusted pivot points.

Allow your Greenfield to cool after use. The quenching contraction effect from hosing off the machine when it's at operating temperature could also draw water and dirt into the bearings.

The best way to clean your Greenfield is to use an air hose or garden blower to blow the loose grass, etc. from around pulleys, belts and the top of the cutter deck. Wash the exterior the same as you would your car. For maximum machine life, do not spray water on the engine, pulleys and bearings. Reoil all pivots after wash.

V BELTS

Inspect the belts and replace if damaged or worn. Both the drive belt and the cutter belt on your Greenfield slasher mower adjust automatically.

Your part numbers for V belts are: CUTTER V BELT GT 382
DRIVE V BELT GT 383

IMPORTANT: For long service life, use only **GENUINE GREENFIELD** branded V belts, Refuse substitutes.

BLADES AND BELTS

Blades

Check condition of blades, blade bolts and blade holder.

Replace if damaged or worn. Worn or damaged blades and bolts are a major hazards. Always replace worn or damaged blades and bolts in sets to preserve balance.

Use only **GENUINE GREENFIELD** branded replacement blade and bolts. Use of inferior non genuine replacement parts on your Greenfield could result in costly damage or even personal injury.

Your part numbers for blades and bolts are:

Blade set GT 2140

Bolt set GT 2110

Blade & Bolt set GT 2141

To fit new blades refer to illustration A.

Tighten the blade bolt nut firmly. Correct torque is 44 Nm (32 ft.lbs). Blades must be free to move but not loose. Lightly oil the blade pivot point before fitting.

Illustration A

TO CHANGE CUTTER BELT

1. Remove the spark plug lead to prevent accidental starting.
2. Disengage the blade clutch and drive clutch.
3. Remove the front cover.
4. Remove the belt guide from the engine pulley.
5. Support the weight of the cutter deck then disconnect the lifting chain.
6. Remove the belt from the pulleys and replace with a **GENUINE GREENFIELD** GT 382 V Belt.
7. Refit the lifting chain, belt guide & cover.
8. Replace spark plug lead.

TO CHANGE DRIVE BELT

1. To remove the drive belt, the cutter belt must first be removed from the engine pulley. Follow steps # 1 to # 4 of "TO CHANGE CUTTER BELT" then drop the cutter belt from the engine pulley only.
2. Release the tension spring from the drive belt idler pulley and slide the pulley back.
3. Remove the drive belt from the pulleys and replace with a **GENUINE GREENFIELD** GT 383 V Belt.
4. Replace the tension spring to the idler pulley.
5. Replace the cutter belt onto the engine pulley, replace the belt guide and cover.
6. Replace spark plug lead.

GUARANTEE

Greenfield Products Pty Ltd the manufacturer guarantee their product free of faulty workmanship and material for a period of 12 months for domestic use, 3 months for commercial use. Engines used on Greenfield mowers carry the respective manufacturers warranty.

This Guarantee will not apply to:

- Fair wear and tear, V Belts, Tyres, Tubes, Blades and Blade Bolts, blade holder, and damage caused by misuse, neglect and accidents.
- Repairs rendered necessary or arising from use of other than genuine Greenfield parts, or the relevant genuine engine manufacturers parts.
- Any work performed by other than an authorised Greenfield dealer, or damages arising therefrom or parts that have been tampered with or dismantled.

Products or parts considered faulty should be returned intact to the authorised Greenfield dealer, or direct to Greenfield with all necessary information, freight paid for inspection. In all warranty claims the manufacturers decision is final and binding.

The benefits conferred by the above guarantee are in addition to all other rights and remedies in respect of the product which the consumer has under existing laws in Australia and New Zealand.

Greenfield Products Pty Ltd, the manufacturer reserves the right to change parts and specifications without notice.
